Stroke patients

Meet inclusion criteria and sign informed consents

Randomization (N=50)

Control group (N=25)

Tai Chi group (N=25)

Standard conventional rehabilitation programs

Tai Chi rehabilitation program + standard conventional rehabilitation programs

4 weeks (5 times weekly)

Primary and secondary outcome measurements

Dropouts in each group and reasons

3 months follow-up period

Primary and secondary outcome measurements

Lost to follow-up in each group and reasons

Final statistical analysis

Figure 1: Flowchart of the study design.
