<table>
<thead>
<tr>
<th><strong>Primary</strong></th>
<th>Proportion of unfavourable neurological outcomes at 6 months: severe disability (defined as GOSE score 2 to 4), or death (GOSE score 1).</th>
</tr>
</thead>
</table>
| **Secondary** | 1. Probability of an equal or greater GOSE level at 6 months compared to the probability of a lesser GOSE level  
2. Mortality at 6 months  
3. Proportion of patients with proximal deep venous thrombosis (DVT) detected during regular screening by compression Doppler ultrasound  
4. Proportion of patients with composite thrombotic vascular events (deep vein thrombosis, pulmonary embolus, myocardial infarction, cardiac arrest and cerebrovascular events) at 6 months  
5. Quality of life assessment (assessed by two standardized questionnaires: Short Form-12® and EQ-5D) at 6 months  
6. Cost-effectiveness analysis at 6 months based on the EQ-5D with utilities calculated using the EQ-5D results and costs calculated based on ICU, acute and post-acute care resource use |
