The diagram illustrates the comparison between direct endoscopy and monitor endoscopy for sagittal head inclination, sagittal trunk inclination, lateral trunk inclination, and right-upper-arm elevation.

- **Sagittal Head Inclination**:
  - Direct Endoscopy: Various inclination angles are shown with different time segments.
  - Monitor Endoscopy: Similar inclination angles are depicted.

- **Sagittal Trunk Inclination**:
  - Direct Endoscopy: Different inclinations from -40° to 40° are displayed over time.
  - Monitor Endoscopy: Matching inclination patterns are observed.

- **Lateral Trunk Inclination**:
  - Direct Endoscopy: Angles range from -40° to 40°, with respective time segments.
  - Monitor Endoscopy: Corresponding inclination ranges are visible.

- **Right-Upper-Arm Elevation**:
  - Direct Endoscopy: Elevation from 0° to 90°, with time distribution.
  - Monitor Endoscopy: Matching elevation angles are shown.

Time is indicated on the x-axis in minutes, ranging from 0 to 30.
