**Figure 4**

![Graphs showing IL-8 and MCP-1 levels in donors 1 and 2. The x-axis represents different treatments such as None, FSL-1, Poly I:C, lipid A, ssPolyU, FK156, MDP, Q9-40, and R9-10. The y-axis represents the levels of IL-8 and MCP-1 in ng/ml. Each bar graph includes error bars and symbols indicating statistical significance. The figure illustrates differences in cytokine production across the treatments and donors.]
