The diagram illustrates the number of plant species used for various disease conditions. The conditions are labeled as follows:

- Tuberculosis
- Oral candidiasis
- Herpes zoster
- Herpes simplex
- Skin rashes
- Chronic diarrhea
- Cryptococcal meningitis

The x-axis represents the disease conditions, while the y-axis shows the number of plant species used. The number of plant species used ranges from 0 to 30. The diagram indicates that the number of plant species used for Tuberculosis is the highest, followed by Oral candidiasis and Herpes simplex, and the lowest for Cryptococcal meningitis.
