The bar chart shows the number of citations for various medicinal plants in urban and rural areas.

- **Cocinina indica** has the highest number of citations in both urban and rural areas, with urban citations being significantly higher.
- **Azadirachta indica**, **Syzygium cumini**, and **Terminalia chebula** follow, with similar numbers of urban and rural citations.
- **Trigonella foenum-graecum**, **Ficus racemosa**, **Momordica charantia**, and **Swietenia mahagoni** have the least number of citations, with urban citations being slightly higher than rural.

The chart indicates a clear trend towards higher urban engagement in the citation of medicinal plants.
