Protect pets and people: 
**PAUSE to CLEAN your PAWS!**

If you could see what's there...

...you'd CLEAN what's here!

Pets can carry a large number of bacteria, viruses and parasites in their mouths, noses, skin and fur - often with no signs of illness or infection.

Many can be transmitted to other animals, and some even to people!

Hands are the #1 way infections spread. It only takes 15 seconds to clean your hands properly by washing or using an alcohol-based hand sanitizer. It can help stop the spread of infections to pets, to their owners, and to you!

Clean Hands = Healthier Pets + Healthier People
