The graph shows the variation of leukocytes (giga/l) over time for calves labeled 1 to 6. The x-axis represents time of blood sampling with markers for hours and days, while the y-axis shows leukocytes (giga/l) ranging from 0 to 20. The graph includes a legend indicating different calves as follows:

- **calf 1**: Yellow line
- **calf 2**: Pink line
- **calf 3**: Blue line
- **calf 4**: Purple line
- **calf 5**: Green line
- **calf 6**: Brown line

The data points for each calf are plotted against the x-axis, showing the fluctuations in leukocyte levels over the sampled time period.
