The Kaplan-Meier survival plot shows the overall survival of two groups: MGMT methylated and MGMT not methylated. The plot indicates a statistically significant difference between the two groups, with a p-value of 0.009. The number at risk for each group over time is as follows:

- **MGMT methylated**: 17, 13, 12, 8, 4, 1, 1, 0
- **MGMT not methylated**: 13, 12, 6, 2, 0, 0, 0, 0
