The image shows a bar chart comparing the percentages of patients in different time periods (1-5, 6-12, 13-24, 25-36, and 37-48 months) between groups G2 and G1. The chart indicates that the percentage of patients in the 13-24 month period is significantly higher in group G2 compared to G1, with a p-value of less than 0.001. Additionally, the percentage of patients in the 1-5 month period is significantly higher in group G2 compared to G1, with a p-value of 0.041. The chart also shows that the percentage of patients in the 25-36 and 37-48 month periods is higher in group G2, although the significance is not explicitly stated.
