Suspected AMI

- Hemodynamic stabilisation
  - Hydration
- Correct asidosis, arrhythmias
- Prevent/treat sepsis

ABDOMINAL CT, CT ANJIOGRAPHY

Mesenteric arterial occlusion

- Diagnostic laparoscopy
  - Perforation (+): Laparotomy
  - No Perforation: Selective mesenteric angiography
    - The guidewire passing distal to the thrombus: Trombolithic treatment
    - The guidewire not passing distal to the thrombus: Anticoagulant treatment
      - NOMI: Conservative
      - Second look laparoscopy
        - Necrosis (+): Laparotomy
        - No necrosis: Observation

Mesenteric vein occlusion

- Peritonism (+): Diagnostic laparoscopy or Laparotomy
- No Peritonism: Close clinic observation or Long life anticoagulant treatment
