Specialized onco-ophthalmologic evaluation

- Bilateral extensive disease
  - Attempt of a bilateral conservative approach: Chemotherapy (debated)
  - According to:
    - Tumor response and
    - Evolution of retinal detachment
  - Secondary unilateral enucleation and contralateral conservative approach

- Very asymmetric disease
  - Enucleation of the most involved eye (if applicable, after initial chemotherapy)

- No extensive disease in any eye
  - Conservative approach of the less involved eye
  - Bilateral conservative approach
