Figure S1. No correlation between weight and Rotarod test performance in 12-month-old mice (n as indicated in Figure 2). a) Between all mice in Bl6 background and weight ($r^2 = 0.087, p = 0.114$). b) Between all mice in Bl6/129sv background and weight ($r^2 = 0.041, p = 0.321$).
