Fig. 8.

![Graph showing the relationship between DPPH scavenging activity and reducing power with concentration of phenolics.]

- **A**: DPPH scavenging activity (%)
  - Equation: $y = 4.1949x + 35.044$
  - $R^2 = 0.9644$

- **B**: Reducing power
  - Equation: $y = 0.0388x + 0.1534$
  - $R^2 = 0.9441$

- **C**: DPPH scavenging activity (%)
  - Equation: $y = 3.2026x + 48.754$
  - $R^2 = 0.9593$

- **D**: Reducing power
  - Equation: $y = 0.0317x + 0.2411$
  - $R^2 = 0.899$

Concentration of phenolics (mg/g FW)
