The graph shows the percentage of $^{14}$C over time for different concentrations of HA (Hydroxyapatite).

- **No HA**
- **HA 15 µg/g**
- **HA 187.5 µg/g**
- **HA 1875 µg/g**

The y-axis represents the percentage of $^{14}$C, ranging from 0 to 40. The x-axis represents time in days, ranging from 0 to 125.

The graph includes a legend identifying different concentrations of HA with specific markers.

$I = \text{HSD}$
