Simultaneously specimens collection using Eswab and Amies gel Transystem

**Eswab slides:**

Using:
- A= 100 µl Amies from E-swab
- B= 50 µl Amies from E-swab

Two sets of slides are also prepared at 24 and 72h after the collection time

A set of slides are prepared at the time of collection (time 0)

Gram-staining of the slides using an automated slide stainer

Microscopic observation of the slides and record of the results

**Amies gel Transystem slides**

Direct Smear from Amies Gel Transystem

Gram-staining of the slides using an automated slide stainer

Microscopic observation of the slides and record of the results
