The absorbance of fresh CW at different temperatures is shown in (A). The absorbance values are plotted against wavelength (nm) for temperatures ranging from 35.0°C to 99.8°C. The absorbance values are given for different temperatures and wavelengths.

The absorbance at 350 nm is measured at various temperatures, as shown in (B). The absorbance values are plotted against temperature (°C) for temperatures ranging from 385°C to 99.8°C. The absorbance values are given at two wavelengths: 385 nm (×) and 540 nm (■). The absorbance values are given for two temperatures: 50°C and 60°C.
