**Figure 1.** The relationship between serum 25(OH)D and plasma hCAP18.

**A.** A strong positive correlation is observed between serum 25(OH)D and plasma hCAP18, with a Pearson's correlation coefficient ($r = 0.81$, $p < 0.005$).

**B.** A weaker positive correlation is observed between serum 25(OH)D and plasma hCAP18, with a Pearson's correlation coefficient ($r = 0.19$, $p = \text{n.s.}$).
