The graph shows the IADL scores at different time points:

- **Pretraumatic:**
  - Score: 5.0
  - Standard Error: 1.0
  - p-value: 0.195

- **At 6 months:**
  - Score: 4.5
  - Standard Error: 1.0
  - p-value: 0.070

- **At 12 months:**
  - Score: 4.5
  - Standard Error: 1.0
  - p-value: 0.668

The graph indicates no significant change in IADL scores between pretraumatic and 12 months post-trauma, with the highest significance found at 6 months.
