A) The graph shows the IPSS (International Prostate Symptom Score) for all cases, with data points at different post-operative months (1, 3, 6, 9, 12, 18, 24). The number of cases at each time point varies, with the total number of cases being 100.

B) The graph separates the cases into two groups: the moderate to severe group (8–35 points, n = 47) and the mild group (0–7 points, n = 53). The data points for each group are marked with red and blue lines, respectively, and show a decline in IPSS over time.
