Integration of National AIDS Control Program and National Rural Health Mission

**Aim**
To scale up HIV screening among pregnant women registered for antenatal care

**Strategy**
- HIV screening through outreach activity at PHCs and Sub-centers on village health and nutrition day
- Increasing facility based ICTCS and improving their functionality
- Initiating HIV screening through nurses at village level

**Process**
- Advocacy
- Sensitization
- Capacity building
- Focused communication for demand generation
- Joint Micro-planning, implementation and Monitoring

**Output**
- Reduced gap between ANC registrations with NRHM and HIV screenings in ANC
- Increased HIV screening among antenatal attendees at primary health care level
- Improved detection of HIV infected pregnant women
- Sensitized village level health workers
- Improved linkage of infected mother to antiretroviral therapy/prophylaxis
- Linkage of exposed infant to early

**Advantages**
- Comprehensive HIV and Antenatal care services at primary level
- Early knowledge of sero status leading to opportunity to access HIV care, support and treatment services
- Empowering women with the knowledge required to live a HIV free life
- Responsive, responsible and sustainable health systems
