The bar chart shows the mean weekly units of alcohol consumption by age and gender. The data is divided into four age groups: 16-24, 25-44, 45-64, and 65 or over.

- In the 16-24 age group, both men and women consume an average of 14.1 units per week.
- In the 25-44 age group, men consume an average of 16.7 units per week, while women consume an average of 8.1 units per week.
- In the 45-64 age group, men consume an average of 17.9 units per week, while women consume an average of 8.9 units per week.
- In the 65 or over age group, men consume an average of 12.2 units per week, while women consume an average of 2.7 units per week.

The chart indicates that men generally consume more alcohol than women across all age groups.
