Management of dogs with no clinical signs and laboratory abnormalities

- **SEROPOSITIVE**
  - Retest to confirm seropositivity. Monitor with physical examination, routine laboratory tests and serological tests every 3-6 months.

- **SERONEGATIVE**
  - Monitor every 6-12 months
  - Evaluate seroconversion
  - Evaluate possible development of illness

Treatment is not recommended

**Prevention**

- Protect with topical insecticide repellents to minimize the transmission of infection
