Fig. 1

(A) Western blot analysis showing NICD levels with different concentrations of DAPT.

(B) Western blot analysis showing NICD levels with different concentrations of cpd E.

(C) Graph illustrating the level of inhibition of DAPT on NICD expression with concentration (% of control).

(D) Graph illustrating the level of inhibition of cpd E on NICD and Aβ expression with concentration (% of control).

Levels of inhibition are represented as a percentage of control.
