Figure 4

The bar chart illustrates the LDH (Δabs 490nm) levels in response to different concentrations of colloidal silver (ng/mL). The y-axis represents LDH levels, and the x-axis shows the colloidal silver concentrations at 0, 3.5, and 14 ng/mL. The chart compares the LDH levels between MCF-7 and PBMC samples, indicated by black and gray bars, respectively. Asterisks (*) denote statistically significant differences.
