The chart shows the tumor volume (mm³) over days after treatment for different groups:

- **NS** (yellow triangles): Tumor volume increases steadily with time.
- **CDDP** (magenta squares): Tumor volume increases at a slower rate compared to NS.
- **Lip-mS** (blue circles): Tumor volume remains relatively constant over time.
- **Lip-mS + CDDP** (green diamonds): Tumor volume decreases over time compared to other groups.

The y-axis represents the tumor volume (mm³), and the x-axis represents the number of days after treatment.
