Figure 3

The figure shows a bar graph illustrating the effect [% change to control] at different concentrations of a substance. The graph compares the response in F344 and Lewis strains at 5 U/ml and 50 U/ml concentrations. The bars are shaded differently for each strain, with error bars indicating variability.

- At 5 U/ml:
  - F344: # (no significant difference)
  - Lewis: * (significant difference)

- At 50 U/ml:
  - F344: # (no significant difference)
  - Lewis: # (no significant difference)
