Figure 1

![Graph showing relative % Salmonella adhesion at 37°C and 41°C. The x-axis represents different conditions: Control (No Lactobacilli), With L. rhamnosus, and With L. gasseri. The y-axis represents the relative % Salmonella adhesion. The graph shows that L. rhamnosus significantly decreases adhesion at 37°C compared to the control, while L. gasseri has a moderate effect at 41°C.]
