The diagram illustrates the percent actives found as a function of the percent database screened for various scoring methods. The methods include:

- **Gold / Goldscore**
- **Gold / Chemscore**
- **Gold / Affinity**
- **Glide / Gscore**
- **Ph4 Filter**

The curves show how the percent actives found increase with the percent database screened. The Ph4 Filter curve is particularly notable for its steep increase and high percent actives found at higher database screening percentages.
