The figure shows the relationship between NEAT score and plasma glucose (left) and serum insulin (right). The correlation coefficients and p-values are as follows:

- Plasma glucose: $r = -0.420$, $P = 0.019$
- Serum insulin: $r = -0.194$, $P = 0.207$

The data points are plotted on scatter plots, with NEAT score on the x-axis and the respective metabolic parameter on the y-axis.
