The bar graph shows the expression of ESR1 mRNA [x-fold] during the time course of treatment [days] with Ribavirin. The duration of treatment is indicated as [days], with values of 2, 4, 6, and 8 days. The x-axis represents the duration of treatment in days, and the y-axis represents the expression of ESR1 mRNA in x-fold. The control group is shown at the lowest expression level, while the treatment groups at 2, 4, 6, and 8 days show a progressive increase in expression.
