Cumulated grass pollen count grains/m3 - during the three peak seasons

2005 = 1460 grains/m³  
(Medium grass pollen season)

2006 = 1245 grains/m³  
(Mild grass pollen season)

2007: 1922 grains/m³  
(Severe grass pollen season)

Number of patients (N=183) with follow-up data, who initiated SCIT after the grass pollen season 2005 and 2006 (inclusion years), respectively. This represents the baseline.

2005 = 50 patients  
2006 = 133 patients

Patients followed up in 2006 and 2007 (follow-up years). This represents follow-up years (with grass pollen seasons ranked), dependent of inclusion year.

Inclusion after 2005  
Medium season

Follow-up after 2006 = 9 patients  
Mild season

Inclusion after 2005  
Medium season

Follow-up after 2007 = 41 patients  
Severe season

Inclusion = 2006  
Mild season

Follow-up after 2007 = 133 patients  
Severe season
