Figure 2 - AQ scores in the control parent group

The figure shows the distribution of AQ scores for control fathers and mothers. The x-axis represents the AQ score, ranging from 0 to 50, while the y-axis represents the percent of participants. The data is color-coded, with blue bars indicating control fathers and orange bars indicating control mothers. The peak of the distribution is around AQ scores of 12 to 20, with a higher concentration of participants in the control fathers group compared to control mothers.
