The image presents a bar chart illustrating the differences in blood pressure between orchid-intact and ovx-intact conditions for various groups. The x-axis represents the difference in blood pressure (Orch-Intact) mm Hg, ranging from -50 to 0, and the y-axis represents the difference in blood pressure (Ovx-Intact) mm Hg, ranging from 0 to 50.

The groups compared include:
- C57+Ang II
- W+L-NAME
- SD+Aldo+NaCl
- DS+LS
- DS+HS
- SHR+LS
- SHR+HS
- mRen2.Lewis
- SPSHR

Each group is represented by a bar indicating the difference in blood pressure. The bars are shaded to show the magnitude of the difference, with some bars marked with a symbol (§) indicating a significant difference.
