The maximum number of weeks in a row without low back pain per subject based on two populations, a Danish study and a Swedish study. The data shows the percentage of people in each category for different weeks: 0, 1 to 2, 3 to 6, 7 to 10, and 11 to 18 weeks. The percentages range from 11 to 31% in the Danish study and 13 to 27% in the Swedish study.
