[The text is not transcribed due to the nature of the content, which is graphical and illustrative. The diagrams show blood glucose and plasma insulin levels over time for different conditions: normal control, glucose control, and glucose + CNX-011-67. The graphs illustrate the effects of CNX-011-67 on glucose and insulin levels, showing a 39% decrease in Glucose AUC (0-120min) and a 31% increase in Insulin AUC (0-30min) compared to control groups.]
