Figure 3

(A) Bar graph showing the comparison of $K_m$ (or KcG) μM for different variants. The graph includes controls and treated samples.

(B) A bar graph illustrating the comparison of $K_m$ (or Kbox) μM for the same variants. The graph shows a significant difference between the controls and treated samples.

(C) A bar graph depicting the pmol 2-HG/μg total protein levels for various variants. The graph indicates a significant increase in 2-HG levels in treated samples compared to controls.
