The percent change from baseline values of central venous pressure (mmHg).

The percent change from baseline values of heart rate (%).

The percent change from baseline values of systolic blood pressure (%).

The percent change from baseline values of diastolic blood pressure (%)

Figure: The results of changes in central venous pressure (CVP), heart rate (HR), systolic and diastolic pressure. The change in CVP was expressed as differences from the baseline values (mean ± SE). Other results were expressed as means (SE) of percent change from the baseline values. *: p < 0.05 vs. control group.
