Figure 3. A. Relationship between baseline muscle oxygen consumption (NIRVO2; arbitrary units) and percent change in muscle oxygen consumption for both the Full sample (r = -0.679, p = 0.001), and Subgroup Sample (r = -0.689, p = 0.019). B. Relationship between baseline Recovery (Upslope) and percent change in Recovery (Upslope) for both the Full sample (r = -0.250, p = 0.275), and Subgroup Sample (r = -0.278, p = 0.407). C. Relationship between baseline small vessel perfusion (PPVsmall vessel) and percent change in small vessel perfusion for the Subgroup Sample (r = -0.474, p = 0.141). D. Relationship between baseline small vessel flow (MFI small vessel) and percent change in small vessel flow in the Subgroup sample (r = -0.418, p = 0.201).
