Condition of the haemato-oncology patient

Post-operative period
Elective procedure

Medical complication

Haematological prognosis

Good
(initial diagnostic phase, 1st line treatment, good probability of recovery)

Intermediate
(2nd line treatment, HSCT)

Poor
(relapsing disease with no hope of complete remission; no hope of long term survival)

PICU Trial

Improvement
Continue PICU

No improvement

Acceptable duration and quality of life

Poor duration and/or quality of life

Team discussion

PICU admission with adapted level of support

Comfort care
Preferably provided on the haemato-oncology ward

Palliative PICU
Under exceptional circumstances

No PICU admission

Early PICU admission
Full support
