The concentration of PFOS and PFOA in blood [µg/L] at various gestation weeks and at birth is shown in the graph. The data is sourced from Fei et al. 2007 and Monroy et al. 2008.

- **GW 1-12**: Concentration of PFOS at 35.3 µg/L, PFOA at 5.6 µg/L.
- **GW 13-28**: Concentration of PFOS at 29.9 µg/L, PFOA at 4.5 µg/L.
- **GW 24-28**: Concentration of PFOS at 18.3 µg/L, PFOA at 2.4 µg/L.
- **Birth**: Concentration of PFOS at 16.19 µg/L, PFOA at 2.24 µg/L.

The concentration in the umbilical cord at birth is higher for PFOS at 7.19 µg/L and lower for PFOA at 3.7 µg/L.
