The graph shows the concentration in serum [µg/L] of PFOA and PFOS over the years 1987 to 2002. The concentration of PFOA remained relatively low from 1987 to 1999, with a slight increase in 2002 to 31.4 µg/L. PFOS, on the other hand, showed a notable increase from 1999 to 2002, with a peak of 7.1 µg/L in 2002.
