Figure 6. Cumulative mortality rates of *Adalia bipunctata* larvae [±SE] raised on Bt-toxin coated meal moth eggs plus Bt-toxin dipped cotton balls compared to the Bt-free control. Data represent the mean of 3 replications (n=32). Significant higher mortalities ($\chi^2$MH test) compared to the control (dotted line) are indicated by * (p < 0.05) and ** (p < 0.01).
