The bar chart shows the proteolytic activity (%) for various conditions. The x-axis represents different concentrations of magnesium chloride (MgCl₂) and magnesium sulfate (MgSO₄) in mM, ranging from 0.5 mM to 5 mM, and the control condition is Milk 10%. The y-axis represents the proteolytic activity percentage. The chart indicates a significant increase in proteolytic activity with increasing concentrations of MgCl₂ and MgSO₄, especially noticeable in the Milk 10% condition.
