FIG 2

L. corymbulosa  S. martiana

The figure shows the results of a study comparing different physiological parameters (a) A (µmol m$^{-2}$ s$^{-1}$), (b) Tr (mmol m$^{-2}$ s$^{-1}$), (c) g$\text{s}$ (mm s$^{-1}$), and (d) $E_{\text{s}}$ Isoprene (µg g$^{-1}$ h$^{-1}$) between L. corymbulosa and S. martiana across different developmental stages (nf, 1df, 2df, 3df, 4df, 5df, 6df). The bars represent the mean values, and error bars indicate the standard error. Significant differences are indicated by asterisks.
