Figure 4

DNA dot-blot experiment: Detection of *cam C* gene in from the Plasmid DNA of camphor isolates. Biotinylated probe made with *cam C* gene PCR amplicon of positive control was used for detection. **P** – Plasmid DNA of positive control; **1 to 15** shows positive signal with respect to the presence of *cam C* gene in Plasmid DNA of all 15 unique camphor utilizing HPC-isolates.
