Figure plots estimated change (from trend) in household based work participation at the minimum age of employment for non-hazardous work against the estimated change in paid employment participation at the same age. “Household Based Work” combines work in the family farm or business with work in unpaid household services. Fitted regression line also pictured. One outlier in change in paid employment omitted. A “2” after the country code (see Table 1) indicates the data comes from the MICS2 survey for the country (“3” for MICS3). All countries.
