Fig 4

(a) Images showing control, ET-1 10 nM, and positive control cells.

(b) Bar graph showing the percentage of positive cells (% of positive cells (cell score)) for control and ET-1 (10 nM) treatments, with p < 0.005 for both Bcl-2 and Bad.

(c) Bar graph showing the ratio of Bcl-2 to Bad for control and ET-1 (10 nM) treatments.
