Survivin levels were measured in healthy controls and RA patients with different stimulations:
- TNF-α, 100 ng/ml
- TSST-1, 10 ng/ml
- PHA, 2.5 μg/ml
- ConA, 1.25 μg/ml
- LPS, 100 ng/ml
- Non-stimulated

The graph shows the mean ± standard deviation of Survivin levels in pg/ml. Healthy controls, $n=6$ and RA patients, $n=3$.
