In the image, there are scatter plots comparing the percentage of IL-23R+CD8+ T cells in CD8+ T cells across different conditions:

(a) Day 0:
- Normal
- Inactive SLE
- Active SLE
- Total SLE
- Psoriasis

(b) Day 3:
- Normal
- Inactive SLE
- Active SLE
- Total SLE
- Psoriasis

Significance levels are indicated with asterisks:
- *p = 0.0006
- *p = 0.0021
- *p = 0.0032
- *p = 0.0006
- *p = 0.0019
- *p = 0.0101
- *p = 0.0041
- *p = 0.0019

The plots show a significant difference in the percentage of IL-23R+CD8+ T cells in CD8+ T cells between the conditions, particularly between Normal and Inactive SLE, Active SLE, and Total SLE.
